

HCP based Mobile Data Visualization for SAP Lumira

Improve mobility and data access for business on the move.

Real-time access to data visualization and analytics are critical to business success. Lack of visibility to key on-premise data visualizations such as SAP Lumira stories can often lead to process inefficiency and redundancies. As the need to analyze and interpret enterprise data in real-time continues to increase, so does the demand for SAP HANA Cloud Platform apps.

Charter Global's proprietary HCP based mobile data visualization for SAP Lumira uses a powerful and agile technology implementation platform that gives companies the ability to extend their on-premise Lumira story data and critical business dashboards to any mobile device using SAP Hana Cloud platform and SAPUI5 (SAP User Interface for HTML 5). Data visualizations can be easily accessed from the user-friendly app interface and is automatically refreshed as the back-end data is updated. As a result, business leaders can access critical data and collaborate more easily to make strategic business decisions faster.

Charter Global drives innovation through the integration of business processes to mobile and application development. We are a trusted SAP partner that offers out-of-the-box integration with SAPUI5 mobile. Our multidisciplinary global team provides end-to-end solution implementation and support to ensure real-time transaction processing and enhanced data accuracy for your SAP HANA cloud platform.

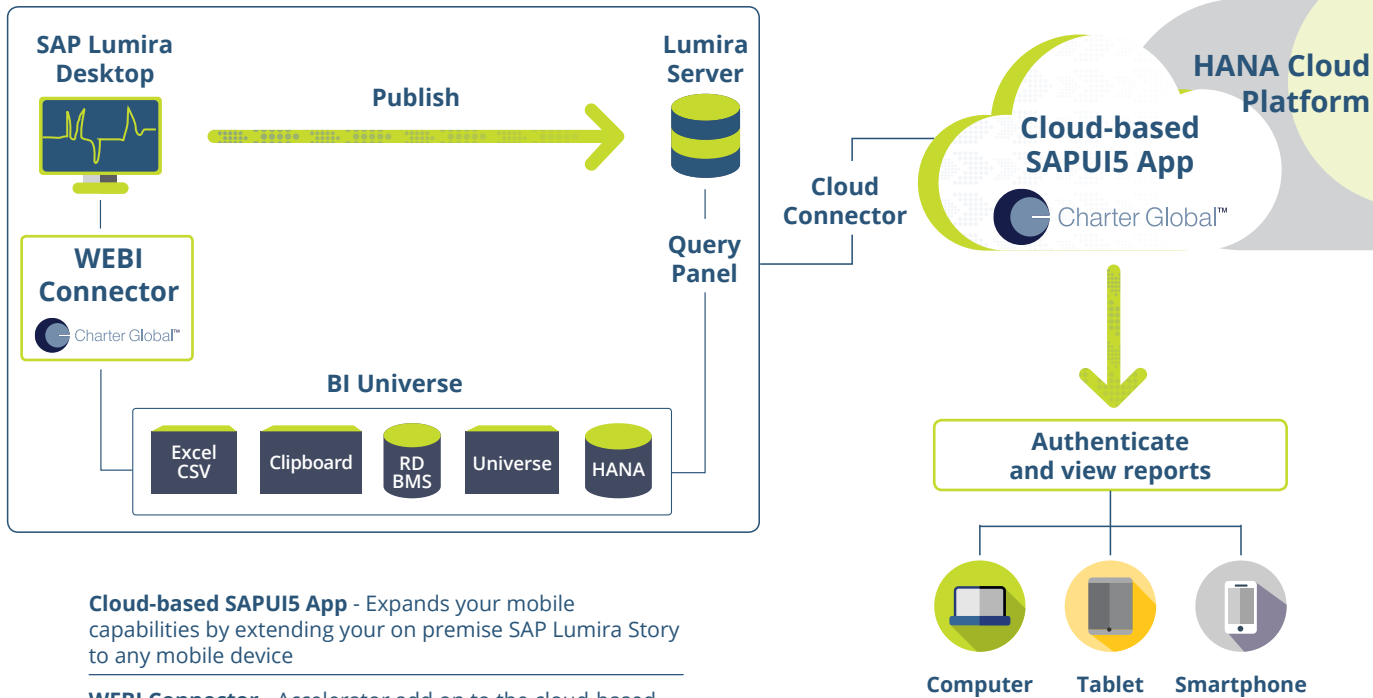

Solution Features and Enhancements

- Pre-configured solution
- Compatible with multiple mobile operating systems
- Enables display of on premise Lumira reports in cloud
- Responsive data visualization capability*

* Can be customized on request

Architecture

Cloud-based SAPUI5 App - Expands your mobile capabilities by extending your on premise SAP Lumira Story to any mobile device
